

WP3
03.12.21

Tasks done during the week

- Peak calling with MACS on the test data
 - necessary for data received from previous groups?
 - comparison between methods?
- TOBIAS test runs with the test data
 - doesn't work with clusters yet, indexing problems

Problems

- Indexing Problems with clusters
 - header seems to be copied, needs to be adjusted to just the cluster probably
- BINDetect: Error with test data
 - will see if that happens with other data, too

Tasks for next week

- Working with data from WP1/2 if possible
- adjusting script to deal with indexing problem
- checking if errors still show up with different data sets, adaptation to these conditions
