# WP3

26.11.2021

Tasks done during the previous week

- Wrote a first version of a script for clustering
  - seems to do its job with the test data at first glance

Tasks for next week

- Refining the script
  - evaluating the accuracy of the output
    - bug fixes
  - working with data from the previous groups instead of the test data (if possible)
  - adjusting to problems caused by this (if needed)
- Trying out TOBIAS with the .bam files for each cluster
  - additional files?
